

INTEGRATED DEVELOPMENT ENVIRONMENT (IDE)

OVERVIEW:

1. TEXT EDITOR
2. WEB BROWSER
3. FIRST HTML FILE

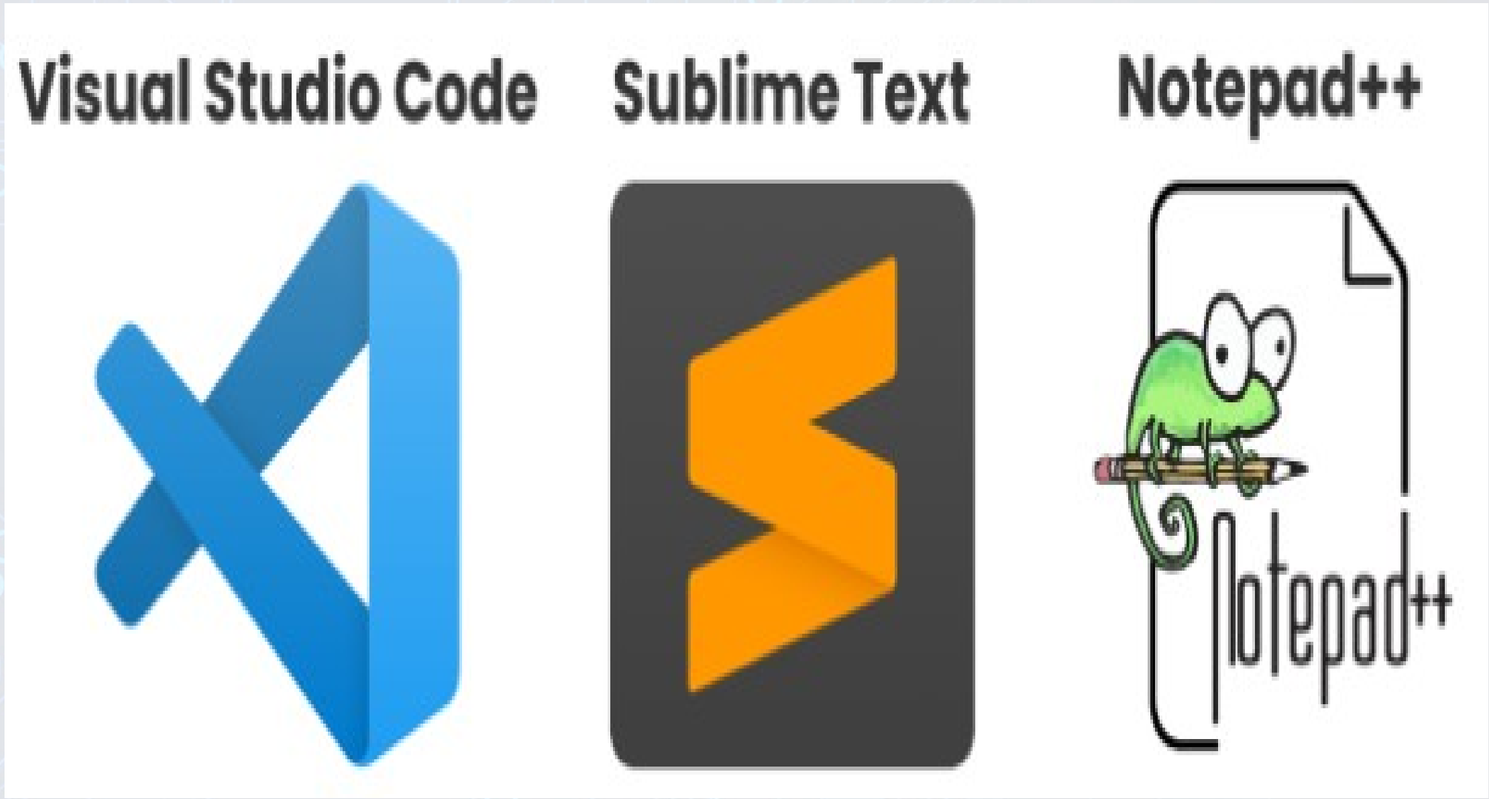

TEXT EDITOR

A text editor is a software application that allows you to create and edit plain text files, and to write and edit code. For writing HTML code, you can use any basic text editor, such as *Notepad* on Windows or *TextEdit* on Mac.

TEXT EDITOR

However, using a dedicated text editor specifically designed for coding can greatly enhance your learning process. Text editors like:

- **Visual Studio Code,**
- **Sublime Text, and**
- **Notepad++**

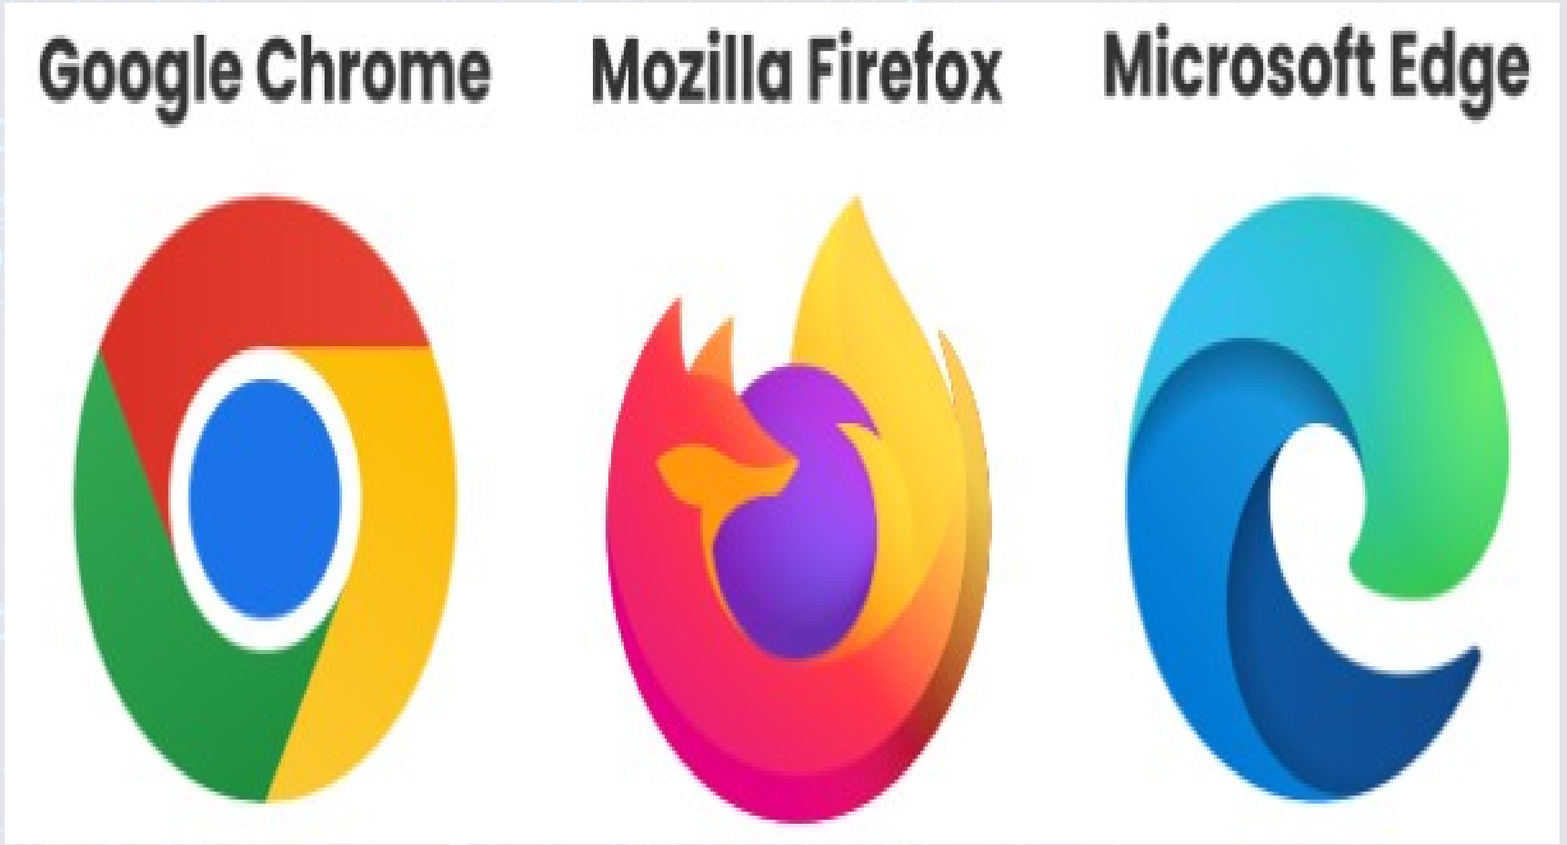

WEB BROWSER

A web browser is necessary to **open, view and test your HTML code**. Most modern web browsers include built-in developer tools that can help you debug your code and analyze your web page's performance. They are designed to **interpret HTML code and display its content, formatting, and layout** in a user-friendly way.

WEB BROWSER

Examples of commonly used web browsers include:

- **Google Chrome,**
- **Mozilla Firefox, and**
- **Microsoft Edge.**

HOW TO OPEN?

- To view an HTML file in a web browser, you can simply double-click on the file in your file system, and the web browser associated with HTML files should open and display the file.
- Alternatively, you can open the web browser and then use its File menu or a keyboard shortcut to open the HTML file.

FIRST HTML FILE

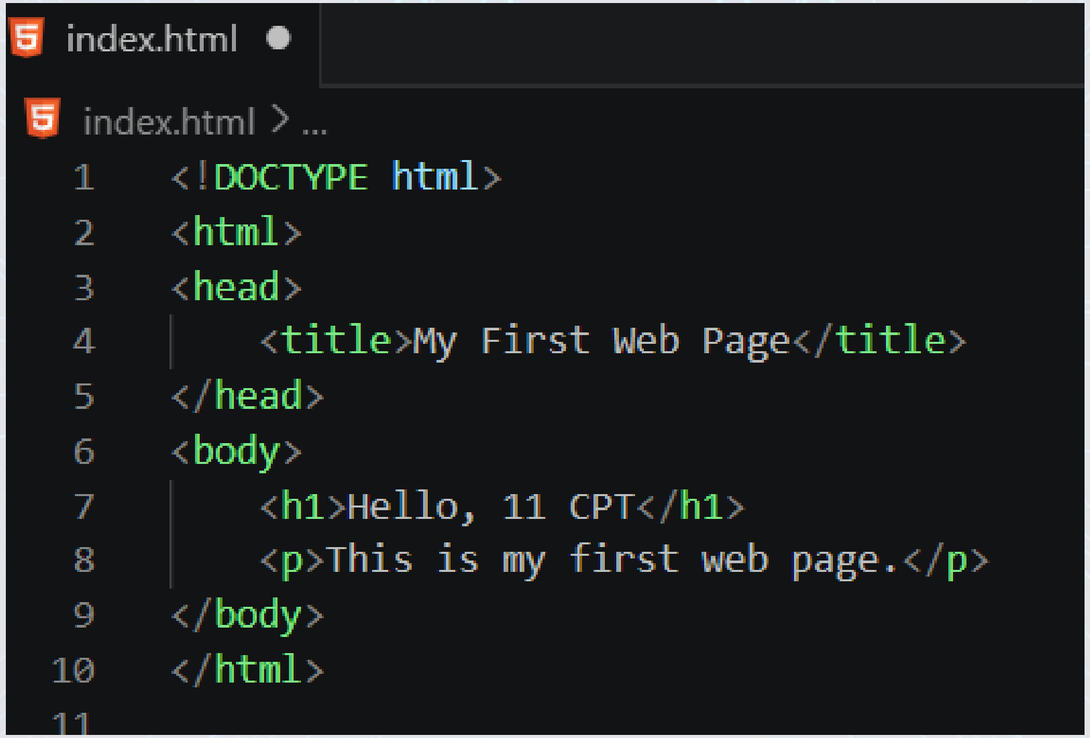

Step 1 – Create an HTML File

- Open your text editor and create a new file. It's time to give life to your web page! Save the file with a memorable name and make sure to use the *.html* extension, such as ***sample.html***. This tells the computer that it's an HTML file.
- For default file use “**index.html**”.

FIRST HTML FILE

Step 2 – Write the HTML code

- Open your text editor and create a new file. It's time to give life to your web page! Save the file with a memorable name and make sure to use the .html extension, such as sample.html. This tells the computer that it's an HTML file.

FIRST HTML FILE

Step 3 – Save and open the HTML file

- Save the HTML file and navigate to the location where you saved it. Double-click on the file, and like magic, it will open in your default web browser.

THANK
YOU
