HTML LINKS | ACTIVITY PACK

Use Link Elements, Attributes, and Values in Designing Web Pages

Link Elements → Attributes → Navigation

LEARNING OBJECTIVES

By the End of This Lesson, You Will...

01 **Identify** the HTML link element and its key attributes.

02 **Create** hyperlinks to internal pages, external sites, and other resources.

03 **Apply** link attributes and values to build clear webpage navigation.

TODAY'S ROADMAP

Link Element → Attributes → Navigation

Link Element →

The building block: <a> (anchor) wraps the text or image that becomes clickable.

Attributes →

Extra instructions in the opening tag: href, target, title, download, and more.

Navigation

Using links and their attributes to connect pages and guide the user smoothly.

Basic Link Structure — <a>

A link is created with the <a> (anchor) tag. The href attribute tells the browser where the link goes.

```
<a href="https://www.eac.edu.ph">
  Visit EAC Website
</a>
```

Output: Visit EAC Website (clickable, underlined text)

TAG SUMMARY

<a>	Defines a hyperlink (anchor)
href	Required — sets the link destination
Link text	The clickable words or image between <a> and

Link Attributes & Values

Attribute	Used On	Example Value	What It Does
`href`	`<a>`	`URL, #id, mailto:, tel:`	Sets the link destination
`target`	`<a>`	`_blank, _self`	Controls where the link opens
`title`	`<a>`	`any text`	Shows a tooltip on hover

Absolute vs. Relative Links

An absolute link gives the full web address. A relative link points to a file within the same website.

```
<!-- Absolute -->
<a href="https://www.w3schools.com">
  W3Schools
</a>
```

Points to a page on another website.

RELATIVE LINK EXAMPLE

```
<!-- Relative -->
<a href="about.html">
  About Us
</a>
```

Points to a file in the same project/folder.

Email, Phone & Bookmark Links

```
<!-- Email link -->
<a href="mailto:info@eac.edu.ph">
  Email Us
</a>

<!-- Phone link -->
<a href="tel:+639171234567">
  Call Us
</a>
```

BOOKMARK / ANCHOR LINK

```
<a href="#section2">
  Jump to Section 2
</a>

<h2 id="section2">
  Section 2
</h2>
```

The id must match exactly what follows the # in href.

ACTIVITY 1 · 5 MIN

Warm-Up: What Kind of Link Is This?

Read each href value. Students shout the correct link type.

`href="https://www.google.com"`	**Absolute / external link**
`href="contact.html"`	**Relative / internal link**
`href="mailto:teacher@eac.edu.ph"`	**Email link**
`href="tel:+639171234567"`	**Phone link**
`href="#top"`	**Bookmark / anchor link**

WRAP-UP

Exit Ticket

1. What attribute is required to make a link work?

2. Which attribute makes a link open in a new tab?

3. Give one real webpage example where an email or phone link would be useful.

GREAT WORK, WEB DESIGNERS!

Links connect pages. Attributes control how that connection happens.
