LESSON 9 | ACTIVITY PACK

Iframe and Frame in HTML

Embedding Content → Attributes → Webpage Design

LEARNING OBJECTIVES

By the End of This Lesson, You Will...

01 **Identify** the <iframe> element and its key attributes.

02 **Create** embedded content in a webpage using <iframe>.

03 **Apply** iframe attributes and values to design safe, well-sized embeds.

TODAY'S ROADMAP

Iframe Element → Attributes → Embedded Content

Iframe Element →

<iframe> embeds another HTML page inside the current page, like a window into another site.

Attributes →

Extra instructions in the opening tag: src, width, height, title, loading, sandbox, and more.

Embedded Content

Using iframes to show maps, videos, forms, or other pages directly inside your webpage.

Basic Iframe Structure — <iframe>

An iframe embeds another HTML page inside the current page. src points to the page to embed.

```
<iframe src="https://www.eac.edu.ph"
  width="600" height="400">
</iframe>
```

Output: a 600×400 box on the page showing the EAC website, just like a mini browser window.

TAG SUMMARY

<iframe>	Embeds another HTML page
src	Required — the URL of the page to embed
width / height	Sets the visible size of the iframe box

Iframe Attributes & Values

Attribute	Example Value	What It Does
`title`	`any text`	Describes the embedded content for screen readers
`loading`	`lazy, eager`	Delays loading offscreen iframes until needed
`allowfullscreen`	`(no value needed)`	Lets embedded content (e.g., videos) go fullscreen
`sandbox`	`allow-scripts, allow-forms, etc.`	Restricts what the embedded page can do
`name`	`any text`	Lets a link's target attribute open inside this iframe

Styling an Iframe with CSS

Older HTML used the frameborder attribute. In modern HTML, use CSS instead to control the border.

```
<style>
  iframe {
    border: none;
  }
</style>
```

Removes the default border box around the iframe.

OLD ATTRIBUTE (AVOID)

```
<iframe src="page.html"
  frameborder="0">
</iframe>
```

frameborder still works in most browsers, but it is outdated — CSS border is the modern way.

The Old <frame> and <frameset> (Deprecated)

Before <iframe>, HTML 4.01 used <frameset> to split the entire browser window into sections, each holding a <frame>.

```
<frameset cols="25%,75%">
  <frame src="menu.html">
  <frame src="main.html">
</frameset>
```

WHY WE DON'T USE THIS ANYMORE

- <frameset> and <frame> are not supported in HTML5
- They caused problems with bookmarking, printing, and SEO
- <iframe> replaced them — it embeds content within a page instead of splitting the whole window

ACTIVITY 2 · 10 MIN

Attribute Match-Up

In pairs, match each code snippet in Column A to the correct effect in Column B.

COLUMN A	COLUMN B
`loading="lazy"`	The iframe only loads once it's about to scroll into view
`allowfullscreen`	Lets an embedded video expand to fill the screen
`sandbox=""`	Applies all restrictions, blocking scripts, forms, and more
`title="Campus Map"`	Gives screen reader users a description of the embed

ACTIVITY 3 · 10 MIN

Code Detective: Spot the Bug

Each snippet below has one error. In groups, find it and write the corrected line.

Snippet 1

```
<iframe href="page.html"
  width="400">
</iframe>
```

HINT

Wrong attribute — should be src, not href

Snippet 2

```
<iframe src="video.html"
  fullscreen>
</iframe>
```

HINT

Attribute should be "allowfullscreen", not "fullscreen"

Snippet 3

```
<iframe src="map.html">
  <iframe>
```

HINT

Closing tag should be </iframe>, not another <iframe>

ACTIVITY 5 · 20 MIN

Group Challenge: Embed a Resource Page

In groups of 3–4, design a webpage section that embeds outside content: **a school location map, a YouTube tutorial video, or a Google Form survey.**

YOUR EMBED MUST INCLUDE

- ○ A working src pointing to the content being embedded
- ○ width and height sized appropriately for the content
- ○ A title attribute describing the embed for accessibility
- ○ CSS used to style or remove the default border

GREAT WORK, WEB DESIGNERS!

Iframes bring other pages into yours. Attributes make that window safe, sized, and accessible.
