CSS Text, Font & Color

Lesson 3

Grade 11 | Quarter 2 | CPNT 2.1

LESSON

3

CSS Text, Font & Color

Styling readable, well-designed text using CSS properties

CPNT 2.1

What You Will Be Able To Do

Unpacked Performance Standards

1. Apply appropriate text and font properties to improve webpage readability.

2. Apply CSS color properties to enhance webpage appearance.

3. Combine text, font, and color properties in designing a webpage.

LESSON 3 • DISCUSSION

Text & Font Properties

These CSS properties control how text looks and reads on a webpage.

Aa

font-family

Sets the typeface — e.g. Arial, "Times New Roman", or a generic fallback like sans-serif.

12

font-size

Controls how large or small text appears — measured in px, em, rem, or %.

B

font-weight / font-style

font-weight adjusts boldness (normal, bold, 100–900); font-style adds slant (normal, italic).

≡

text-align / text-decoration

text-align positions text (left, center, right, justify); text-decoration adds or removes underline, strikethrough, etc.

Text & Font Properties

12

`font-size`

Controls how large or small text appears — measured in px, em, rem, or %.

em

```
body {
  font-size: 16px; /* Base font size */
}

h1 {
  font-size: 2.5em; /* 2.5 * 16 = 40px */
}

h2 {
  font-size: 1.875em; /* 1.875 * 16 = 30px */
}

p {
  font-size: 1em; /* 1 * 16 = 16px */
}
```

Text & Font Properties

12

`font-size`

Controls how large or small text appears — measured in px, em, rem, or %.

rem

```
html {
  font-size: 16px; /* Set the root font size */
}

h1 {
  font-size: 2.5rem; /* 2.5 * 16 = 40px */
}

h2 {
  font-size: 1.875rem; /* 1.875 * 16 = 30px */
}

p {
  font-size: 1rem; /* 1 * 16 = 16px */
}
```

LESSON 3 • DISCUSSION

Working with Color in CSS

Color in CSS can be applied to text and backgrounds, and written in several formats.

A

color

Sets the color of an element's text.

▦

background-color

Sets the color that fills the space behind an element.

#

Color Formats

Named (navy), HEX (#1E2761), RGB (rgb(30,39,97)), and HSL (hex(1,10%,20%) — all describe the same idea, different notation.

◐

Contrast & Readability

Always pair text and background colors with enough contrast so content stays easy to read.

Putting Text, Font & Color Together

This snippet styles a heading and a paragraph using font and color properties in combination.

```
h1 {
  font-family: 'Arial', sans-serif;
  font-size: 32px;
  font-weight: bold;
  color: #1E2761;
  text-align: center;
}

p {
  font-family: Georgia, serif;
  color: rgb(74, 79, 106);
  background-color: #F4F6FB;
}
```

LESSON 3 • ASSESSMENT

Quick Check: Text, Font & Color

1. Which CSS property changes the typeface of a webpage's text?
2. Which CSS property controls how large or small text appears?
3. Give three different ways to write a color value in CSS.
4. What is the difference between the color and background-color properties?
5. Which text-align value centers text horizontally on the page?

LESSON 3 • ACTIVITY

Hands-On: Style the Text & Colors

Written Work: CSS Text & Color Styling Exercise

Apply text, font, and color properties to a provided webpage to improve its readability and appearance.

1. Open the provided plain webpage (an unstyled article/profile page).
2. Apply font-family and font-size to headings and paragraph text.
3. Apply font-weight, text-align, and text-decoration where appropriate.
4. Choose a color scheme using at least two color formats (e.g., HEX and RGB) for text and background.

Thank you!
